Project Design Phase-I
Solution Architecture

Date	10 November 2023
Team ID	Team-591679
Project Name	T20 TOTALITARIAN: MASTERING SCORE PREDICTIONS
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.

- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.

- Provide specifications according to which the solution is defined, managed, and delivered.
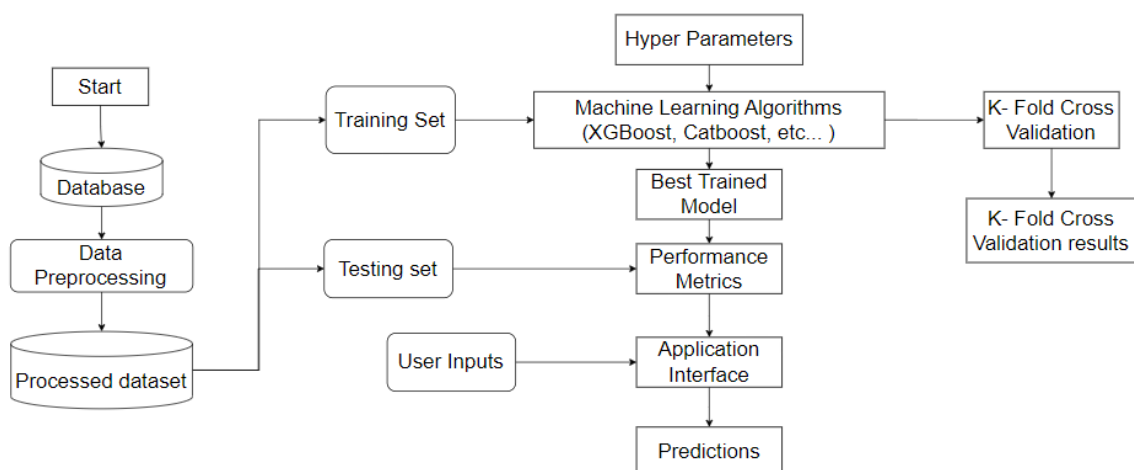

Example - Solution Architecture Diagram:

Figure 1: Solution Architecture describing the project of T20 score Prediction.
